

Technical Information

Compact thermometer

Easytemp TMR31, TMR35

For general (TMR31) or hygienic applications (TMR35), with Pt100, class A sensor and 4-wire connection

Optionally with integrated 4 to 20 mA transmitter, PC programmable

Applications

- Designed for universal use in general or hygienic applications in the Food & Beverages and Life Sciences industries. Preferred installation locations include compact vessels and pipes - anywhere a compact thermometer design with short immersion lengths and reliable measurement offers additional advantages.
- Measuring range: -50 to +150 °C (-58 to +302 °F), with extension neck up to 200 °C (392 °F)
- Pressure range: up to 100 bar (1 450 psi)
- Protection class: IP69K
- Output
 - Without electronics: Pt100 (4-wire connection)
 - With electronics: 4 to 20 mA

Your benefits

Quick installation and easy commissioning:

- Small, compact design, made entirely of stainless steel
- M12 connection with IP69K protection for easy electrical connection
- Pt100, 4-wire connection or PC-programmable transmitter with 4 to 20 mA output
- Can also be ordered with preconfigured measuring range
- Variable installed lengths from 40 to 600 mm (1.57 to 23.6 in)

Outstanding measurement properties thanks to innovative sensor technology:

- Extremely short response times
- Very accurate even with short immersion lengths
- Thinfilm sensor element Pt100, accuracy class A (IEC 60751)

Safe operation with certificates and approvals:

- Device safety according to EN 61010-1
- Electromagnetic compatibility as per NAMUR NE21
- Failure information in the event of sensor break or sensor short circuit, configurable according to NAMUR NE43
- TMR35: hygiene-compliant design with 3-A mark, EHEDG certification, ASME BPE conformity, FDA, EC 1935/2004, EN 2023/2006, TSE/ADI
- Marine approval according to DNV GL

Function and system design

Measuring principle

Resistance thermometer (RTD):

This insert uses a Pt100 according to IEC 60751 as the temperature sensor. The temperature sensor is a temperature-sensitive platinum resistor with a resistance of 100 Ω at 0 °C (32 °F) and a temperature coefficient $\alpha = 0.003851 \text{ } ^\circ\text{C}^{-1}$.

Thin film resistance sensors (TF):

A very thin, ultrapure platinum layer, approx. 1 μm thick, is vaporized in a vacuum on a ceramic substrate and then structured photolithographically. The platinum conductor paths formed in this way create the measuring resistance. Additional covering and passivation layers are applied and reliably protect the thin platinum layer from contamination and oxidation, even at high temperatures. The primary advantages of thin film temperature sensors are their smaller sizes and better vibration resistance.

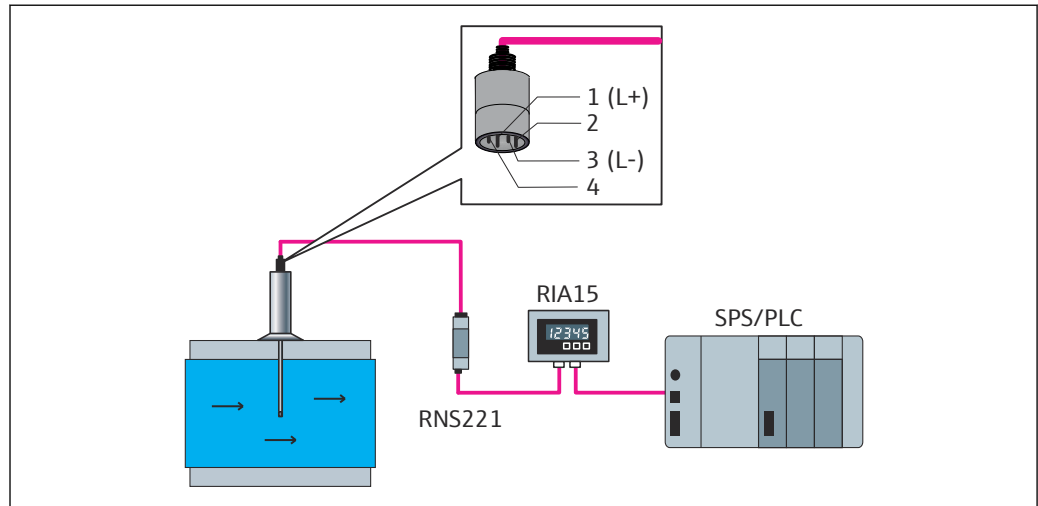

Measuring system

The compact thermometer measures the process temperature with a Pt100 sensor element (class A, 4-wire). An optional built-in transmitter converts the Pt100 input signal to an 4 to 20 mA output signal.

A broad portfolio of optimized components for the temperature measuring point is available to ensure seamless integration of the measuring point:

- Power supply unit/barrier
- Display units
- Overvoltage protection

 For more detailed information, see the brochure "System Products and Data Managers - Solutions for the loop (FA00016K/EN)."

 1 M12 connection with 4 to 20 mA analog output

A0045087

Equipment architecture

Design	Options	
 <p>A0044946</p>	1: Electrical connection, output signal	 Your benefits: <ul style="list-style-type: none"> ■ M12, 4-pin connector, reduced cost and effort, incorrect wiring is prevented ■ Optimum protection, IP69K as standard ■ Compact, integrated transmitter (4 to 20 mA)
	2: Transmitter housing	
	3: Extension neck	Optionally available if process temperature is too high for the electronics
	4: Process connection →  16	Over 25 different versions for industrial and hygienic applications.
	5: Thermowell	<ul style="list-style-type: none"> ■ Versions with and without thermowell (insert in direct contact with process) ■ Thermowell diameter 6 mm (0.25 in)
	6: Insert with Pt100 (TF):	 Your benefits: <ul style="list-style-type: none"> ■ Minimization of necessary immersion length: better product protection thanks to improved process flow ■ Excellent cost-performance ratio ■ Insert: Ø3 mm (1/8 in) or Ø6 mm (1/4 in)

Input

Measuring range Pt100 (TF) according to IEC 60751

Without extension neck	-50 to +150 °C (-58 to +302 °F)
With extension neck	-50 to +200 °C (-58 to +392 °F)

Min. span = 10 K (18 °F)

Output

Output signal	Sensor output	Pt100, 4-wire connection, class A
	Analog output	4 to 20 mA; variable measuring range

Signal on alarm The signal on alarm is generated if the measuring information is missing or not valid. In the 4 to 20 mA mode, the device transmits the failure information according to NAMUR NE43:

Underranging	Linear drop from 4.0 to 3.8 mA
Overranging	Linear increase from 20.0 to 20.5 mA
Failure e.g. sensor defective	<p>≤ 3.6 mA (low) or ≥ 21 mA (high) can be selected</p> <p>The high alarm setting can be set between 21.5 mA and 23 mA, thus providing the flexibility needed to meet the requirements of various control systems.</p>

Load

$R_{b \max} = (U_b \max. - 10 \text{ V}) / 0.023 \text{ A}$ (current output)

A0048582

Linearization/transmission behavior Temperature - linear

Power supply

Supply voltage	U_b	10 to 35 V _{DC}
----------------	-------	--------------------------

- Power supply failure**
- To meet electrical safety according to CAN/CSA-C22.2 No. 61010-1 or UL 61010-1, the device may only be powered by a power supply unit with a limited energy electric circuit in accordance with UL/EN/IEC 61010-1 chapter 9.4 or Class 2 according to UL 1310, "SELV or Class 2 circuit".
 - Behavior in the event of overvoltage (> 30 V)
The device works continuously up to 35 V_{DC} without any damage. If the supply voltage is exceeded, the specified characteristics are no longer guaranteed.
 - Behavior in the event of undervoltage
If the supply voltage falls below the minimum value ~ 7 V, the device switches off in a defined manner (status as if not supplied with power).

Electrical connection According to the 3-A Sanitary Standard and the EHEDG, electrical connecting cables must be smooth, corrosion-resistant and easy to clean.

A0020176

2 Pin assignment, device plug

A Version with transmitter, M12 plug, 4-pin

B Version without transmitter, Pt100, 4-wire connection

1: Pin 1	Power supply 10 to 35 V _{DC} Current output 4 to 20 Cable connection, wire color brown = BN
2: Pin 2	Connection of PC configuration cable - shortened pin Cable connection, wire color white = WH
3: Pin 3	Power supply 0 V _{DC} Current output 4 to 20 Cable connection, wire color blue = BU
4: Pin 4	Connection of PC configuration cable - shortened pin Cable connection, wire color black = BK

Input current required ≤ 3.5 mA for 4 to 20 mA

Maximum current consumption ≤ 23 mA for 4 to 20 mA

Switch-on delay 2 s

Overvoltage protection To protect against overvoltage in the power supply and signal/communication cables for the thermometer electronics, the manufacturer offers the HAW562 surge arrester for DIN rail mounting.

 For more detailed information, see Technical Information HAW562 surge arrester (TI01012K).

Performance characteristics

Reference operating conditions	Adjustment temperature (ice bath)	0 °C (32 °F) for sensor
	Ambient temperature range	25 °C ± 3 °C (77 °F ± 5 °F) for electronics
	Supply voltage	24 V _{DC} ± 10 %
	Relative humidity	< 95 %

Maximum measured error

According to DIN EN 60770 and the reference conditions specified above. The measured error data correspond to $\pm 2 \sigma$ (Gaussian distribution). The data include non-linearities and repeatability.

 |T| = Numerical value of the temperature in °C without regard to algebraic sign.

Thermometer without electronics

Standard	Designation	Measuring range	Measured error ME (\pm)	
			Maximum ¹⁾	Based on measured value ²⁾
IEC 60751	Pt100 Cl. A	-50 to +200 °C (-58 to +392 °F)	0.55 K (0.99 °F)	ME = \pm (0.15 K (0.27 °F) + 0.002 * T)

- 1) Maximum measured error for the specified measuring range.
- 2) Deviations from maximum measured error possible due to rounding.

Thermometer with electronics

Standard	Designation	Measuring range	Measured error (\pm) ¹⁾
IEC 60751	Pt100 Cl. A	-50 to +200 °C (-58 to +392 °F)	0.1 K (0.18 °F) or 0.08 %

- 1) Percentage refers to the set span. The larger value is valid.

Total measured error of thermometer (sensor + electronics)

Standard	Designation	Measuring range	Measured error ME (\pm) ¹⁾
IEC 60751	Pt100 Cl. A	<ul style="list-style-type: none"> ▪ -50 to +150 °C (-58 to +302 °F) without extension neck ▪ -50 to +200 °C (-58 to +392 °F) with extension neck 	ME = \pm (0.25 K (0.48 °F) + 0.002 * T)

- 1) Deviations from maximum measured error possible due to rounding.

Long-term drift

Electronics:
 $\leq 0.1 \text{ K (0.18 °F)/year}$ or 0.05 %/year
 Data under reference operating conditions. % refers to the set span. The larger value is valid.

Operating influences

The measured error data correspond to $\pm 2 \sigma$ (Gaussian distribution).

Ambient temperature	$T = \pm(15 \text{ ppm/K} * (\text{full scale value} + 200) + 50 \text{ ppm/K} * \text{set measuring range}) * \text{DT}$ DT = deviation of ambient temperature from the reference operating conditions
Supply voltage	$\leq \pm 0.01\%/V$ deviation from 24 V ¹⁾
Load	$\pm 0.02\%/100 \Omega$ ¹⁾

- 1) Specifications in percent refer to the full scale value of the measuring range

Sensor response time

Tests in water at 0.4 m/s (1.3 ft/s) according to IEC 60751; temperature changes in increments of 10 K. Response times measured for the version without electronics.

t_{50}	t_{90}
< 1 s	< 2 s

Electronics response time

Max. 1 s

 When recording step responses, it is important to bear in mind that the response times of the sensor might be added to the specified times.

Sensor current

$\leq 0.6 \text{ mA}$

Calibration**Calibration of thermometers**

Calibration involves comparing the measured values of a device under test (DUT) with those of a more precise calibration standard using a defined and reproducible measurement method. The aim is to determine the deviation of the DUT's measured values from the true value of the measured variable. Two different methods are used for thermometers:

- Calibration at fixed-point temperatures, e.g. at the freezing point of water at 0 °C
- Calibration compared against a precise reference thermometer

The thermometer to be calibrated must display the fixed point temperature or the temperature of the reference thermometer as accurately as possible. Temperature-controlled calibration baths with very homogeneous thermal values, or special calibration furnaces into which the DUT and the reference thermometer, where necessary, can project to a sufficient degree, are typically used for thermometer calibrations.

Sensor-transmitter-matching

The resistance/temperature curve of platinum resistance thermometers is standardized but in practice it is rarely possible to keep to the values precisely over the entire operating temperature range. For this reason, platinum resistance sensors are divided into tolerance classes, such as class A, AA or B as per IEC 60751. These tolerance classes describe the maximum permissible deviation of the specific sensor characteristic curve from the standard curve, i.e. the maximum temperature-dependent characteristic error that is permitted. The conversion of measured sensor resistance values at temperatures in temperature transmitters or other meter electronics is often susceptible to considerable errors as the conversion is generally based on the standard characteristic curve.

When temperature transmitters are used, this conversion error can be reduced significantly by sensor-transmitter-matching:

- Calibration at least at three temperatures and determination of the actual temperature sensor characteristic curve
- Adjustment of the sensor-specific polynomial function using appropriate Calendar-van-Dusen (CvD) coefficients
- Configuration of the temperature transmitter with the sensor-specific CvD coefficients for resistance/temperature conversion, and
- another calibration of the reconfigured temperature transmitter with the connected resistance thermometer

The manufacturer offers this sensor-transmitter-matching as a separate service. Furthermore, the sensor-specific polynomial coefficients of platinum resistance thermometers are indicated on every calibration protocol where possible, e.g. at least three calibration points.

For the device, the manufacturer offers standard calibrations at a reference temperature of -50 to +200 °C (-58 to +392 °F) based on the ITS90 (International Temperature Scale). Calibrations in other temperature ranges are available from your local sales center on request. Calibrations are traceable to national and international standards. The calibration certificate is referenced to the serial number of the device.

Installation**Orientation**

No restrictions. However, self-draining in the process must be guaranteed. If there is an opening to detect leaks at the process connection, this opening must be at the lowest possible point.

Installation instructions

The immersion length of the compact thermometer can considerably influence the accuracy. If the immersion length is too short, measurement errors can occur as a result of heat conduction via the process connection and the vessel wall. Therefore, if installing in a pipe, the immersion length should ideally correspond to half of the pipe diameter.

Installation possibilities: pipes, tanks or other plant components.

A0012591

3 Installation examples

- 1, 2 Perpendicular to flow direction, installed at a minimum angle of 3° , to ensure self-draining
- 3 On elbows
- 4 Inclined installation in pipes with a small nominal diameter
- L Insertion length

i The requirements of the EHEDG and the 3-A Sanitary Standard must be adhered to.

Installation instruction EHEDG/cleanability: $L_t \leq (D_t - d_t)$

Installation instruction 3-A/cleanability: $L_t \leq 2(D_t - d_t)$

i In the case of pipes with a small nominal diameter, it is advisable for the tip of the thermometer to project well into the process so that it extends past the pipe axis. Installation at an angle (4) could be another solution. When determining the immersion or insertion length, all the parameters of the thermometer and of the medium to be measured must be taken into account (e.g. Flow velocity, process pressure).

13 Weld-in adapter

14 Vessel wall

15 O-ring

16 Thrust collar

NOTICE

The following actions must be taken if a sealing ring (O-ring) or seal fails:

- ▶ The thermometer must be removed.
- ▶ The thread and the O-ring joint/sealing surface must be cleaned.
- ▶ The sealing ring or seal must be replaced.
- ▶ CIP must be performed after installation.

In the case of weld-in connections, exercise the necessary degree of care when performing the welding work on the process side:

1. Use suitable welding material.
2. Flush-weld or weld with welding radius ≥ 3.2 mm (0.13 in).
3. Avoid crevices, folds or gaps.
4. Ensure the surface is honed and mechanically polished, $R_a \leq 0.76$ μm (30 μin).

Pay attention to the following when installing the thermometer to ensure that the cleanability is not affected:

1. The installed sensor is suitable for CIP (cleaning in place). Cleaning is performed together with the pipe or tank. In the case of internal tank fixtures using process connection nozzles, it is important to ensure that the cleaning assembly sprays this area directly so that it is cleaned properly.
2. The Varivent® connections enable flush-mounted installation.

Environment

Ambient temperature range	T_a	-40 to +85 °C (-40 to +185 °F)
Storage temperature	T_s	-40 to +85 °C (-40 to +185 °F)
Operating altitude	Up to 2 000 m (6 600 ft) above sea level	
Climate class	In accordance with IEC/EN 60654-1, class C	
Degree of protection	As per IEC/EN 60529: IP67 with coupling and connecting cable (not evaluated by UL). Depends on the degree of protection of the connection cable. →  25	
Shock and vibration resistance	4g in the range from 2 to 150 Hz as per DIN EN 60068-2-6	
Electromagnetic compatibility (EMC)	<p>EMC to all relevant requirements of the IEC/EN 61326-series and NAMUR Recommendation EMC (NE21). For details, refer to the Declaration of Conformity.</p> <p>Maximum fluctuations during EMC-tests: < 1 % of measuring span.</p> <p>Interference immunity to IEC/EN 61326-series, requirements for industrial areas</p> <p>Interference emission to IEC/EN 61326-series, electrical equipment Class B</p>	
Electrical safety	<ul style="list-style-type: none"> ▪ Protection class III ▪ Overvoltage category II ▪ Pollution level 2 	

Process

Process temperature range The thermometer electronics must be protected against temperatures over 85 °C (185 °F) by an extension neck of the appropriate length.

Device version without electronics

Independent of the extension neck	-50 to +200 °C (-58 to +392 °F)
--	---------------------------------

Device version with electronics

Without extension neck	-50 to +150 °C (-58 to +302 °F)
With extension neck	-50 to +200 °C (-58 to +392 °F)

The following restrictions apply for the thermometer for general applications with a process connection, depending on the process connection and ambient temperature:

- If mounting with process connections with an adjustable insertion length, e.g. compression fitting with sealing taper, a corresponding extension neck length must be taken into consideration when installing. →  22
- Ambient temperatures must be taken into consideration

Maximum ambient temperature	Maximum process temperature	
	Without extension neck	With extension neck length 35 mm (1.38 in)
≤ 25 °C (77 °F)	150 °C (302 °F)	200 °C (392 °F)
≤ 40 °C (104 °F)	135 °C (275 °F)	180 °C (356 °F)

Maximum ambient temperature	Maximum process temperature	
	Without extension neck	With extension neck length 35 mm (1.38 in)
≤ 60 °C (140 °F)	120 °C (248 °F)	160 °C (320 °F)
≤ 85 °C (185 °F)	100 °C (212 °F)	133 °C (271 °F)

Process pressure range

The maximum possible process pressure depends on various influencing factors, such as the design, process connection and process temperature. Maximum possible process pressures for the individual process connections. → 16

5 Maximum permitted process pressure

L Insertion length
p Process pressure

The diagram not only considers the overpressure but also the pressure load caused by the flow, wherein a safety factor of 1.9 has been specified for operation with flow. The maximum permitted static operating pressure is lower for longer insertion lengths due to the increased bending load caused by the flow. The calculation assumes the maximum permitted flow velocity for the respective insertion length (see the diagram below).

6 Permitted flow velocity depending on the insertion length

L Insertion length during flow

v Flow velocity

A Medium: water at $T = 50\text{ °C}$ (122 °F)

B Medium: superheated steam at $T = 200\text{ °C}$ (392 °F)

The permitted flow velocity is the minimum from the resonance velocity (resonance distance 80%) and the load or buckling caused by flow, which would result in the failure of the thermometer tube or the undershooting of the safety factor (1.9). The calculation was performed for the specified limit operating conditions of $T = 200\text{ °C}$ (392 °F) and process pressure $p \leq 100\text{ bar}$ (1450 psi).

i It is possible to verify the mechanical loading capacity as a function of the installation and process conditions using the online TW Sizing Module for thermowells in the Endress+Hauser Applicator software. → 22

Medium - state of aggregation

Gaseous or liquid (also with high viscosity, e.g. yogurt).

Thermowell design, dimensions

Thermometer for hygienic applications

16 Thermowell for connection to the compact thermometer with spring-loaded cap-nut and G3/8" thread. Dimensions in mm (in)

- 1 Cylindrical thermowell, TL = 70 mm (2.76 in), option WA or 85 mm (3.35 in), option WB, with 3-A[®] symbol, P_{max.} = 250 bar (3 626 psi) with maximum flow velocity of 40 m/s (131 ft/s)
- 2 Thermowell, metal-to-metal seal, P_{max.} = 16 bar (232 psi)

Human interface

Local operation

There are no operating elements directly on the device. The temperature transmitter is configured via remote operation.

Local display	There are no display elements directly on the device. The measured value and diagnostic messages, for instance, can be accessed via the interface with PC software.
Remote operation	Configuration via configuration set TXU10, for PC-programmable thermometer - with setup software (ReadWin 2000) and interface for PC with USB port. The software can be downloaded free of charge from the following website: www.endress.com/readwin

Certificates and approvals

CE mark	The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EC directives. The manufacturer confirms successful testing of the product by affixing to it the CE-mark.
EAC mark	The product meets the legal requirements of the EEU guidelines. The manufacturer confirms the successful testing of the product by affixing the EAC mark.
Hygiene standard	<ul style="list-style-type: none"> ■ EHEDG certification, type EL CLASS I. EHEDG-certified/tested process connections. →  16 ■ 3-A Authorization No. 1144, 3-A Sanitary Standard 74-07. Listed process connections. →  16 ■ ASME BPE, declaration of conformity can be ordered for options indicated ■ FDA-compliant ■ All surfaces in contact with the medium are free from materials derived from bovine animals or other livestock (ADI/TSE)
Materials in contact with food/product (FCM)	<p>The materials of the thermometer in contact with food/product (FCM) comply with the following European regulations:</p> <ul style="list-style-type: none"> ■ (EC) No. 1935/2004, Article 3, paragraph 1, Articles 5 and 17 on materials and articles intended to come into contact with food. ■ (EC) No. 2023/2006 on good manufacturing practice for materials and articles intended to come into contact with food. ■ (EU) No. 10/2011 on plastic materials and articles intended to come into contact with food.
Marine approval	Information on the Type Approval Certificates currently available (DNVGL, BV, etc.) can be obtained from the sales organization.
Other standards and guidelines	<ul style="list-style-type: none"> ■ IEC 60529: Degrees of protection provided by enclosures (IP code) ■ IEC/EN 61010-1: Safety requirements for electrical equipment for measurement, control, and laboratory use ■ IEC/EN 61326 series: Electromagnetic compatibility (EMC requirements)
Material certification	The material certificate 3.1 (according to EN 10204) can be requested separately. The short form certificate includes a simplified declaration with no enclosures of documents related to the materials used in the design of the individual sensor, but guarantees the traceability of the materials through the identification number of the thermometer. The data regarding the origin of the materials can subsequently be requested by the client if necessary.
Calibration	The factory calibration is performed according to an internal procedure in a laboratory of the manufacturer that is accredited by the European Accreditation Organization (EA) according to ISO/IEC 17025. A calibration which is performed according to EA guidelines (SIT/Accredia or DKD/DAKKS) can be requested separately. The calibration is performed on the replaceable insert of the thermometer. In the case of thermometers without a replaceable insert, the entire thermometer - from the process connection to the tip of the thermometer - is calibrated.
UL approval	More information under UL Product iq™, search for keyword "E225237")

Ordering information

Detailed ordering information is available from your nearest sales organization www.addresses.endress.com or in the Product Configurator at www.endress.com:

1. Select the product using the filters and search field.
2. Open the product page.
3. Select **Configuration**.

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

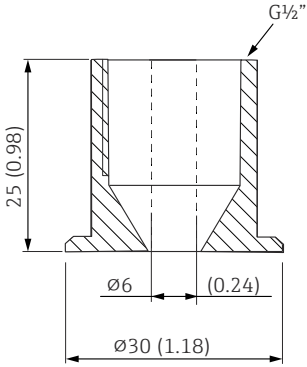

Accessories

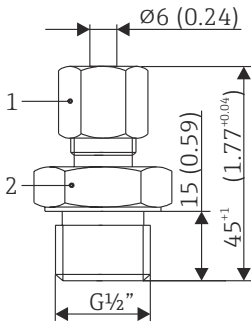

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

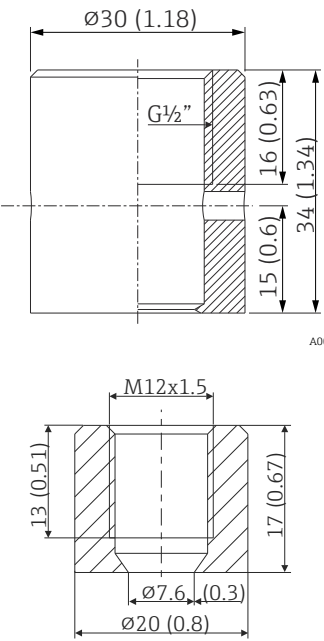

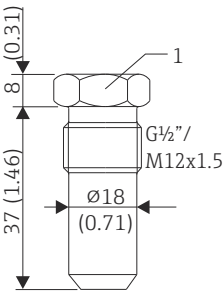

All dimensions in mm (in).
