Technical Information **Proline Promag 55S**

Electromagnetic flowmeter

The flowmeter with outstanding abrasion resistance and integrated solids content diagnostics

Application

- The bidirectional measuring principle is virtually independent of pressure, density, temperature and viscosity
- Ideal for the most demanding applications with high solids content and high abrasion

Device properties

- Intensified coil system
- Large range of liners
- Solids content up to 80% by weight
- 4-line backlit display with touch control
- Two switch outputs
- HART, PROFIBUS PA/DP, FOUNDATION Fieldbus

Your benefits

- Superb signal stability due to unique signal processing
- Maximum safety industry-optimized measuring electrodes and linings
- Energy-saving flow measurement no pressure loss due to cross-section constriction
- Maintenance-free no moving parts
- Highest performance with integrated solids measurement for demanding fluids
- Highest safety integrated electrode cleaning
- Automatic recovery of data for servicing

Function and system design

Measuring principle

Faraday's law of induction states that a voltage is induced in a conductor moving in a magnetic field. In electromagnetic measuring, the flowing medium corresponds to the moving conductor. The induced voltage is proportional to the flow velocity and is detected by two measuring electrodes and transmitted to the amplifier. Flow volume is computed on the basis of the pipe's diameter. The constant magnetic field is generated by a switched direct current of alternating polarity.

 $Ue = B \cdot L \cdot v$ $Q = A \cdot v$

Ue induced voltage В

magnetic induction (magnetic field)

L electrode gap volume flow pipe cross-section current strength

Measuring system

The flow measuring system consists of the following components:

- Promag 55 transmitter
- Promag S sensor (DN 15 to 600 / ½ to 24")

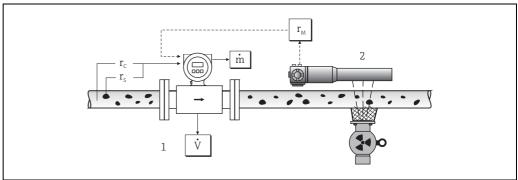

Two versions are available:

- Compact version: Transmitter and sensor form a single mechanical unit.
- Remote version: Transmitter and sensor are installed separately.

Measurement of solids flow rates

In combination with a density meter, e.g. with "Gammapilot M" from Endress+Hauser, Promag 55S also determines the throughput of solids in mass, volume or percentage rates.

The following order specifications are required for this: order option for software function "Solids content flow" (F-CHIP) and order option for a current input.

Solids content flow measurement (m) with the aid of a density and flow measuring device. If the solid density (ρ_s) and the density of the carrier liquid (ρ_C) are also known, they can be used to calculate the solids flow.

- Flow measuring device (Promag 55S) \rightarrow volume flow (V). The solid density (ρ_s) and the density of the transport liquid (ρ_c) must be entered in the transmitter.
- Density measuring device (e.g. "Gammapilot M") \rightarrow total fluid density ($\rho_{\rm M}$) (transport liquid and solids)

Input

Measured variable Flow rate (proportional to induced voltage) • Conductivity (without temperature compensation) Measuring ranges • Flow rate: Typical v = 0.01 to 10 m/s (0.03 to 33 ft/s) with the specified measuring accuracy Conductivity s = 5 to 2000 μ S/cm not for sensors without reference electrode (Promag S with brush electrodes) Over 1000:1 Operable flow range

Input signal

Status input (auxiliary input)

U = 3 to 30 V DC, Ri = 5 k Ω , galvanically isolated Configurable for: totalizer(s) reset, positive zero return, error-message reset

Status input (auxiliary input) with PROFIBUS DP

U = 3 to 30 V DC, $R_i = 3$ k Ω , galvanically isolated. Switch level: ±3...±30 V DC, independent of polarity. Configurable for: positive zero return, error message reset, zero point adjustment start

Current input

Active/passive selectable, galvanically isolated, full scale value adjustable, resolution: 3 μA, temperature coefficient: typically 0.005% o.f.s./°C (0.003% o.f.s./°F)

- \blacksquare Active: 4 to 20 mA, $\rm R_i \le 150~\Omega,~U_{out}$ = 24 V DC, short-circuit proof
- Passive: 0/4 to 20 mA, $R_i \le 150 \Omega$, $U_{max} = 30 \text{ V DC}$

Output

Output signal

Current output

Active/passive selectable, galvanically isolated, time constant selectable (0.01 to 100 s), full scale value adjustable, temperature coefficient: typically 0.005% o.f.s./°C (0.003 % o.f.s./°F), resolution: 0.5 µA

- Active: 0/4 to 20 mA, $R_L < 700 \Omega$ (for HART: $R_L \ge 250 \Omega$)
- Passive: 4 to 20 mA; supply voltage V_S : 18 to 30 V DC; $R_i \ge 150 \Omega$

Pulse/frequency output

Active/passive selectable (Ex i version passive only), galvanically isolated

- Active: 24 V DC, 25 mA (max. 250 mA over 20 ms), $R_L > 100 \Omega$
- Passive: open collector, 30 V DC, 250 mA
- Frequency output: end frequency 2 to 10000 Hz ($f_{max} = 12500 \text{ Hz}$), on/off ratio 1:1, pulse width max. 10 s
- Pulse output: pulse value and pulse polarity selectable, pulse width configurable (0.05 to 2000 ms)

PROFIBUS DP interface

- Transmission technology (Physical Layer): RS485 according to ASME/TIA/EIA-485-A: 1998, galvanically isolated
- Profile Version 3.0
- Data transmission rate: 9.6 kBaud to 12 MBaud
- Automatic identification of data transmission rate
- Function blocks: 2 × analog input, 3 × totalizer
- Output data: volume flow, calculated mass flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model Promag 35S
- Bus address adjustable via miniature switches or local display (optional) at the measuring device
- Available output combination $\rightarrow \triangleq 6$

PROFIBUS PA interface

- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- Profile version 3.0
- Current consumption: 11 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Function blocks: 2 × analog input, 3 × totalizer
- Output data: volume flow, calculated mass flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model Promag 35S
- Bus address adjustable via miniature switches or local display (optional) at the measuring device

FOUNDATION Fieldbus interface

- FOUNDATION Fieldbus H1
- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- ITK version 5.01
- Current consumption: 12 mA
- Inrush current: < 12 mA
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Function blocks:
 - 5 × Analog Input (execution time: 18 ms each)
 - $-1 \times PID (25 ms)$
 - 1 × Digital Output (18 ms)
 - 1 × Signal Characterizer (20 ms)
 - 1 × Input Selector (20 ms)
 - $-1 \times Arithmetic (20 ms)$
 - 1 × Integrator (18 ms)
- Total VCRs: 48
- Total link objects in VFD: 40
- Output data: volume flow, calculated mass flow, temperature, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), reset totalizer
- Link Master (LM) functionality is supported

Signal on alarm

Current output

Failsafe mode selectable (e.g. according to NAMUR recommendation NE 43)

Pulse/frequency output

Failsafe mode selectable

Relay output

"de-energized" in the event of a fault or power supply failure

PROFIBUS DP/PA

Status and alarm messages in accordance with PROFIBUS Profile Version 3.0

Load	See "output signal"
Low flow cut off	Switch points for low flow freely selectable.
Galvanic isolation	All circuits for inputs, outputs, and power supply are galvanically isolated from each other.

Switching output

Relay output

Normally closed (NC or break) or normally open (NO or make) contacts available (default: relay 1 = NO, relay 2 = NC),

max. $30\ V/0.5\ A\ AC$; $60\ V/0.1\ A\ DC$, galvanically isolated. Configurable for: error messages, empty pipe detection (EPD), direction of flow, limit values.

Power supply

Supply voltage

 $20\ to\ 260\ V$ AC, $45\ to\ 65\ Hz$

20 to 64 V DC

Power consumption

AC: < 45 VA at 260 V AC; < 32 VA at 110 V AC (incl. sensor)

DC: < 19 W (including sensor)

Switch-on current:

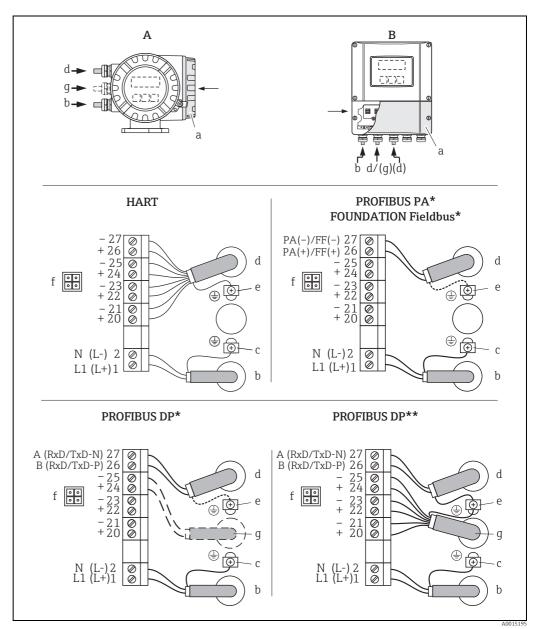

- Max. 2.5 A (< 200 ms) at 24 V DC
- Max. 2.5 A (< 5 ms) at 110 V AC
- Max. 5.5 A (< 5 ms) at 260 V AC

Power supply failure

Lasting min. 1 power cycle:

- EEPROM or HistoROM/T-DAT saves measuring system data if power supply fails
- HistoROM/S-DAT: exchangeable data storage device which stores sensor characteristic data (nominal diameter, serial number, calibration factor, zero point etc.)

Electrical connection

Connecting the transmitter, cable cross-section max. 2.5 mm² (14 AWG)

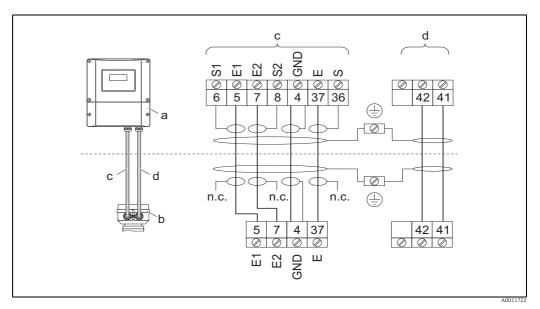

- View A (field housing) A B
- View B (wall-mount housing)
- *) **) Fixed communication boards
- Flexible communication boards
- Connection compartment cover
- Cable for power supply: 20 to 260 V AC / 20 to 64 V DC
- Terminal No. 1: L1 for AC, L+ for DC

 Terminal No. 2: N for AC, L- for DC

 Ground terminal for protective conductor

 Input/output cable: see Terminal assignment $\Rightarrow \boxtimes$ 6 Fieldbus cable:
- Terminal No. 26: DP (B) / PA (+) / FF (+): with polarity protection
 Terminal No. 27: DP (A) / PA (-) / FF (-): with polarity protection
 Ground terminal for input/output cable / Fieldbus cable
 Service adapter for connecting service interface FXA193 (Fieldcheck, FieldCare)
- Electrode cable: see Terminal assignment $\rightarrow \blacksquare 6$
 - Cable for external termination (only for PROFIBUS DP with permanent assignment communication board):
 - Terminal No. 24: +5 V
 - Terminal No. 25: DGND

Electrical connection, remote version

Connecting the remote version

- a Connection compartment, wall-mount housing
- b Cover of connection housing, sensor
- c Electrode cable
- l Coil current cable
- n.c. unconnected, insulated cable shields

Terminal no. and cable colors: 6/5 = brown; 7/8 = white; 4 = green; 36/37 = yellow

Potential equalization

Standard case

Perfect measurement is only ensured when the medium and the sensor have the same electrical potential. Most Promag sensors have a reference electrode installed as standard, which guarantees the required potential equalization. This usually means that additional potential equalization measures are unnecessary.

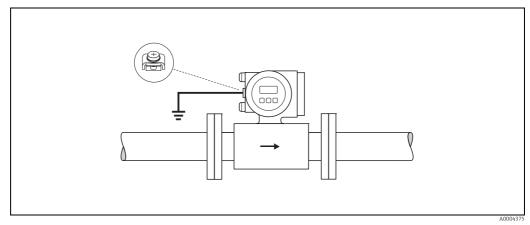

Promag S:

- Reference electrode is standard for electrode materials 1.4435/316L, Alloy C-22, tantalum, titanium Gr. 2, Duplex 1.4462, tungsten carbide coating (for electrodes made of 1.4435)
- Reference electrode is optional for electrode material platinum
- Reference electrode not present in measuring tubes with a natural rubber lining in conjunction with brush electrodes

Note!

For installation in metal pipes, it is advisable to connect the ground terminal of the transmitter housing to the piping. Also, observe company-internal grounding guidelines.

Potential equalization by means of the transmitter's ground terminal

Note!

- For sensors without reference electrodes or without metal process connections, carry out potential equalization as per the instructions for special cases described below. These special measures are particularly important when standard grounding practice cannot be ensured or extremely strong matching currents are expected.
- Sensors with brush electrodes do not have a reference electrode. For this reason, ground disks must be installed if necessary to ensure sufficient potential equalization to the fluid. This applies in particular to isolating lined pipes which are not grounded $\rightarrow \triangleq 9$.

Special cases

Metal, ungrounded piping

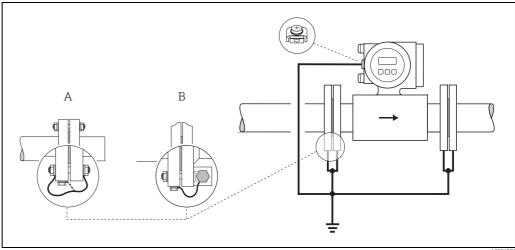

In order to prevent outside influences on measurement, it is necessary to use ground cables to connect each sensor flange to its corresponding pipe flange and ground the flanges. Connect the transmitter or sensor connection housing, as applicable, to ground potential by means of the ground terminal provided for the purpose (see diagram).

The ground cable for flange-to-flange connections can be ordered separately as an accessory from Endress+Hauser $\rightarrow \triangle 45$.

- DN \leq 300 (12"): The ground cable is in direct connection with the conductive flange coating and is secured by the flange screws (A).
- DN \geq 350 (14"): The ground cable connects directly to the metal transport bracket (B).

Also, observe company-internal grounding guidelines.

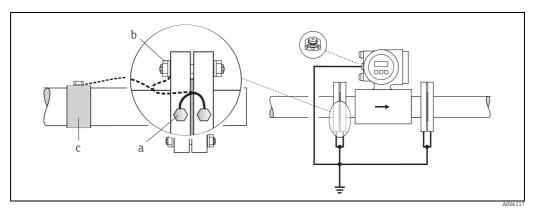

Potential equalization with equalizing currents in ungrounded, metal pipes (ground cable: copper wire, at least 6 mm² /10 AWG)

Installing ground cable at DN \leq 300 (12") Installing ground cable at DN \geq 350 (14")

Pre-installed ground cable for DN \leq 300 (12") (order option)

Ground cables which are preinstalled on the sensor flange, are also available. These ground cables can be mounted and connected electrically to the piping in different ways:

- Using a screw on the side of the pipe flange (a)
- Using the flange screws (b)
- Using a pipe clip installed around the pipe (c)

Possibilities for connecting and mounting pre-installed ground cables (ground cable: copper wire at least 6 $mm^2/10$ AWG)

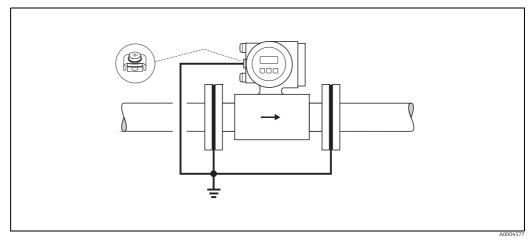

Plastic pipes and isolating lined pipes

Normally, potential is matched using the reference electrodes in the measuring tube. However, in exceptional cases it is possible that, due to the grounding plan of a system, matching currents flow over the reference electrodes. This can lead to destruction of the sensor, e.g. through electro-chemical decomposition of the electrodes. In such cases, e.g. for fiberglass or PVC pipings, it is therefore **essential** that you use additional ground disks for potential equalization. This applies also to two-phase or two-component flow, where the fluid is not well mixed or its constituents are not mixable.

Notel

- Risk of damage by electrochemical corrosion. Note the electrochemical insulation rating, if the ground disks and measuring electrodes are made of different materials.
- Also, observe company-internal grounding guidelines.

Potential equalization/ground disks in the case of plastic pipes or isolating lined pipes (ground cable: copper wire at least 6 mm^2 / 10 AWG)

Plastic pipes and isolating lined pipes

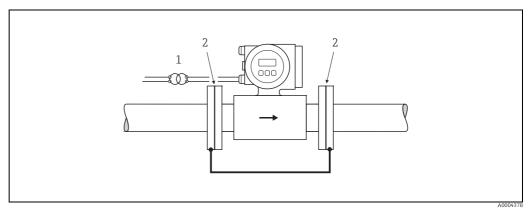

In such cases, install the measuring instrument without potential in the piping:

- When installing the measuring device, make sure that there is a terminal assignment between the two piping runs (copper wire, at least 6 mm^2 / 10 AWG).
- When using ground disks in plastic or isolating lined pipes, ensure that they are electrically connected with each other (copper wire at least 6 mm² / 10 AWG).
- Make sure that the mounting material used does not establish a conductive connection between the
 pipe and the measuring device and that the mounting material withstands the torques applied when
 the threaded fasteners are tightened during installation.
- Check the galvanic isolation using an insulation tester (protection against contact).
- Also comply with the regulations applicable to potential-free installation.

Note!

For the remote version, both the sensor and the transmitter must be installed so that they are potential-free.

Potential equalization and cathodic protection (connecting cable: copper wire at least 6 mm^2 / 10 AWG)

- 1 Isolation transformer power supply
- 2 Electrically insulated

Cable entries

Power-supply and electrode cables (inputs/outputs):

- Cable gland M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Cable entries for thread ½" NPT, G ½"

Fieldbus cable:

- Fieldbus connector for PROFIBUS PA, M12 × 1 / PG 13.5 plus adapter PG 13.5 / M20.5
- Fieldbus connector for FOUNDATION Fieldbus, 7/8-16 UNC × M20

Connecting cable for remote version:

- Cable gland M20 × 1.5 (8 to 12 mm / 0.31 to 0.47")
- Cable entries for thread ½" NPT, G ½"

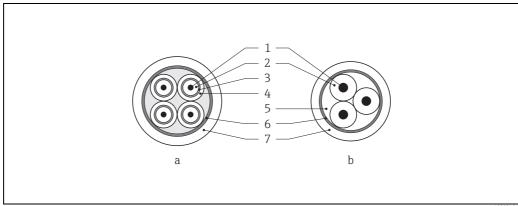

Remote version cable specifications

Coil current cable

- $2 \times 0.75 \text{ mm}^2$ (18 AWG) PVC cable with common, braided copper shield (Ø ~ 7 mm / 0.28")
- Conductor resistance: \leq 37 Ω /km (\leq 0.011 Ω /ft)
- Capacitance: core/core, shield grounded: ≤120 pF/m (≤37 pF/ft)
- Operating temperature:
 - Cable not permanently routed: -20 to +80 °C (-4 to +176 °F)
 - Cable permanently routed: –40 to +80 $^{\circ}$ C (–40 to +176 $^{\circ}$ F)
- Cable cross-section: max. 2.5 mm² (14 AWG)

Electrode cable

- \blacksquare 3 \times 0.38 mm² (20 AWG) PVC cable with common, braided copper shield (Ø \sim 7 mm / 0.28") and individually shielded cores
- With Empty Pipe Detection (EPD): $4 \times 0.38 \text{ mm}^2$ (20 AWG) PVC cable with common, braided copper shield ($\emptyset \sim 7 \text{ mm} / 0.28$ ") and individually shielded cores
- Conductor resistance: $\leq 50 \Omega/\text{km} (\leq 0.015 \Omega/\text{ft})$
- Capacitance: core/shield: ≤ 420 pF/m (≤ 128 pF/ft)
- Operating temperature:
 - Cable not permanently routed: -20 to +80 °C (-4 to +176 °F)
 - Cable permanently routed: -40 to +80 °C (-40 to +176 °F)
- Cable cross-section: max. 2.5 mm² (14 AWG)

A0003194

- a Electrode cable
- b Coil current cable
- 1 Core
- 2 Core insulation
- 3 Core shield
- 4 Core jacket
- 5 Core reinforcement
- 6 Cable shield
- 7 Outer jacket

As an option, Endress+Hauser can also deliver reinforced connecting cables with an additional, reinforcing metal braid. We recommend such cables for the following cases:

- Directly buried cable
- Cables endangered by rodents
- Device operation which should comply with the IP 68 (NEMA 6P) standard of protection

Operation in zones of severe electrical interference

The measuring device complies with the general safety requirements in accordance with EN 61010-1, the EMC requirements of IEC/EN 61326 and NAMUR recommendation NE 21.

Note

Grounding of the shield is by means of the ground terminals provided for the purpose inside the connection housing. Keep the stripped and twisted lengths of cable shield to the terminals as short as possible.

Performance characteristics

Reference operating conditions

To DIN EN 29104 and VDI/VDE 2641:

- Fluid temperature: $+28 \degree C \pm 2 \text{ K} (+82 \degree F \pm 2 \text{ K})$
- Ambient temperature: $+22 \, ^{\circ}\text{C} \pm 2 \, \text{K} \, (+72 \, ^{\circ}\text{F} \pm 2 \, \text{K})$
- Warm-up time: 30 minutes

Installation:

- Inlet run > 10 × DN
- Outlet run > 5 × DN
- Sensor and transmitter grounded.
- Sensor centered relative to the pipe.

Maximum measured error

Pulse output:

- Standard: ±0.2% o.r. ± 2 mm/s (±0.2% o.r. ± 0.08 in/s)
- With brush electrodes (Option): ±0.5% o.r. ± 2 mm/s (±0.5% o.r. ± 0.08 in/s) (o.r. = of reading)

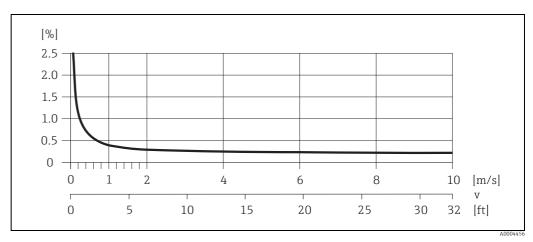

Current output:

In addition typically $\pm 5 \mu A$

Note!

Supply-voltage fluctuations have no effect within the specified range.

Max. measured error in % of reading

Conductivity

- Max. measuring error not specified
- Without temperature compensation (cell constant is a factory setting)

Repeatability

Volume flow

- Standard: max. ±0.1% o.r. ± 0.5 mm/s (±0.1% o.r. ± 0.02 in/s)
- With brush electrodes (Option): max. $\pm 0.2\%$ o.r. ± 0.5 mm/s ($\pm 0.2\%$ o.r. ± 0.02 in/s) (o.r. = of reading)

Conductivity

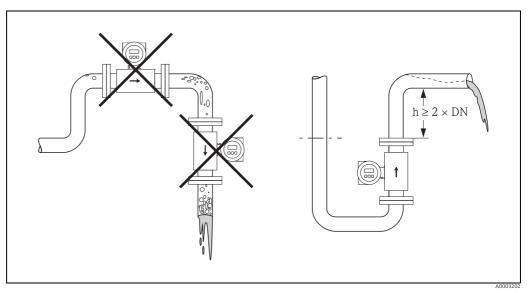

Max. ±5% o.r.(o.r. = of reading)

Installation

Mounting location

The accumulation of air or gas bubbles in the measuring tube could result in an increase in measuring errors. **Avoid** the following locations:

- At the highest point of a pipeline. Risk of air accumulating.
- Directly upstream from a free pipe outlet in a vertical pipeline.

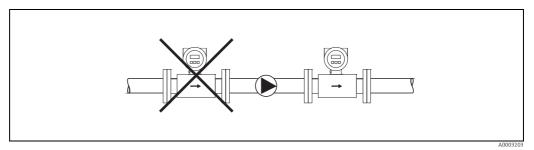

Mounting location

Installation of pumps

Do not install the sensor on the intake side of a pump. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the lining's resistance to partial vacuum $\Rightarrow \triangleq 23$.

It might be necessary to install pulse dampers in systems incorporating reciprocating, diaphragm or peristaltic pumps. Information on the measuring system's resistance to vibration and shock $\Rightarrow riangleq riangleq riangleq 19$.

Installation of pumps

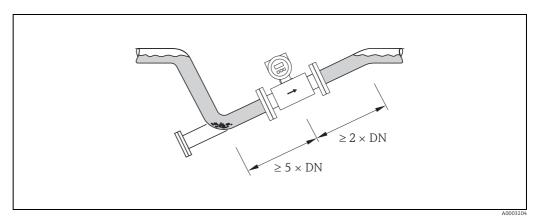

Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration. The Empty Pipe Detection function offers additional protection by detecting empty or partially filled pipes.

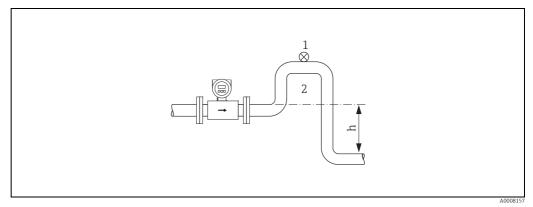

Note!

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

Installation with partially filled pipes

Down pipes

Installation measures for vertical pipes

- 1 Vent valve
- 2 Siphor
- h Vertical height of the down pipe regarding the sensor

Orientation

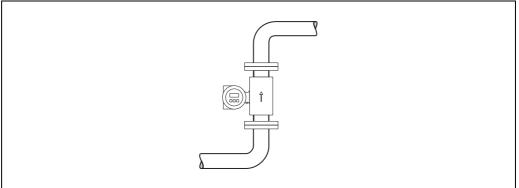

An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube. Promag, nevertheless, supplies a range of functions and accessories for correct measuring of problematic fluids:

- Electrode Cleaning Circuit (ECC) for applications with fluids producing build-up, e.g. electrically conductive deposits \rightarrow "Description of Device Functions" manual.
- Empty Pipe Detection (EPD) ensures the detection of partially filled measuring tubes, e.g. in the case of degassing fluids.

Vertical orientation

A vertical orientation is ideal in the following cases:

- For self-emptying piping systems and when using empty pipe detection.
- For sludge containing sand or stones and where the solids cause sedimentation.

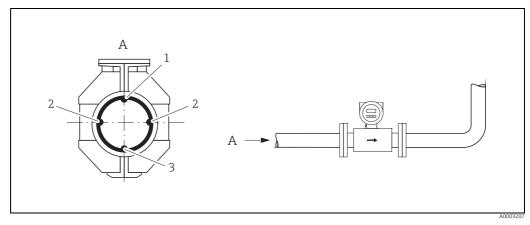

Horizontal orientation

The measuring electrode plane should be horizontal. This prevents brief insulation of the two electrodes by entrained air bubbles.

Empty Pipe Detection functions correctly with the measuring device installed horizontally only when the transmitter housing is facing upward (see diagram). Otherwise there is no guarantee that Empty Pipe Detection will respond if the measuring tube is only partially filled or empty.

EPD electrode for empty pipe detection (not available for "measuring electrode only" option) Measuring electrodes for signal detection

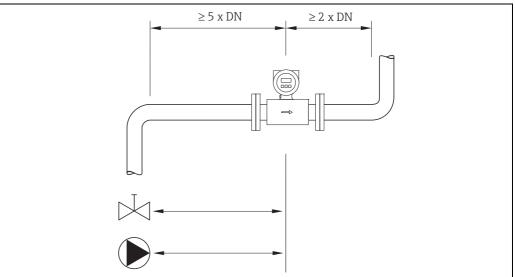

Reference electrode for potential equalization (not available for "measuring electrode only" option)

Inlet and outlet runs

If possible, install the sensor well clear of fittings such as valves, T-pieces, elbows etc.

Compliance with the following requirements for the inlet and outlet runs is necessary in order to ensure measuring accuracy.

- Inlet run \geq 5 × DN
- Outlet run \geq 2 × DN

A0003210

Adapters

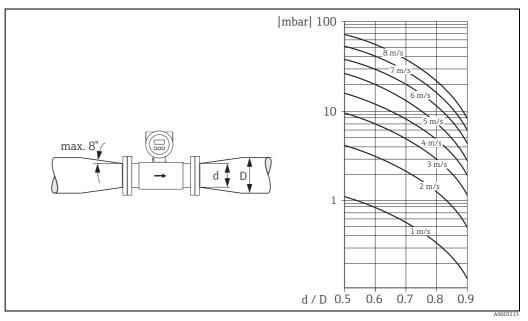

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids. The nomogram shown here can be used to calculate the pressure loss caused by cross-section reduction.

Note!

The nomogram applies to fluids of viscosity similar to water.

- 1. Calculate the ratio of the diameters d/D.
- 2. From the nomogram, read off the pressure loss as a function of fluid velocity (*downstream* from the reduction) and the d/D ratio.

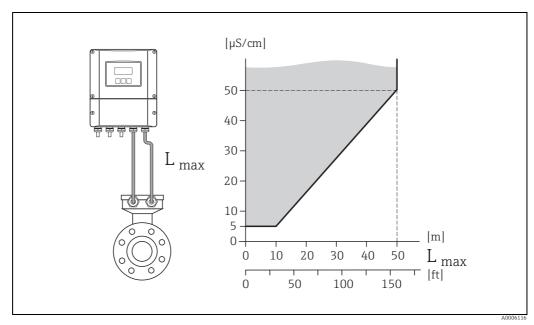

Pressure loss due to adapters (for pressure losses in US units, please contact Endress+Hauser)

Length of connecting cable

In order to ensure measuring accuracy, comply with the following instructions when installing the remote version:

- Secure the cable run or route the cable in an armored conduit. Movement of the cable can falsify the measuring signal, particularly if the fluid conductivity is low.
- Route the cable well clear of electrical machines and switching elements.
- Ensure potential equalization between sensor and transmitter, if necessary.
- $\ \ \, \blacksquare$ The permissible cable length L_{max} depends on the fluid conductivity (see Figure).
- The maximum connecting cable length is 10 m (32.8 ft) when empty pipe detection (EPD) is switched on.

Permitted lengths for connecting cable in remote version, as a function of the conductivity of the fluid

Gray shaded area = permissible area L_{max} = Length of connecting cable

Foundations, supports

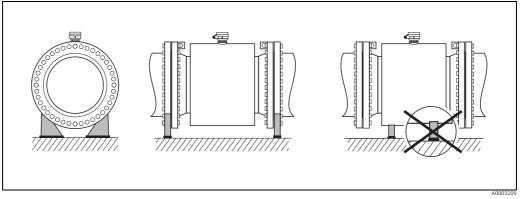

If the nominal diameter is DN \geq 350 (14"), mount the sensor on a foundation of adequate load-bearing strength.

Note!

Risk of damage.

Do not support the weight of the sensor on the metal casing: the casing would buckle and damage the internal magnetic coils.

Correct support for large nominal diameters (DN \geq 350 / 14")

Environment

Ambient temperature range

Transmitter:

- Standard:
 - Compact version: -20 to +50 °C (-4 to +122 °F)
 - Remote version: -20 to +60 °C (-4 to +140 °F)
- Optional:
 - Compact version: -40 to +50 °C (-40 to +122 °F)
 - Remote version: -40 to +60 °C (-40 to +140 °F)

Note

At ambient temperatures below -20 °C (-4 °F), the readability of the display may be impaired.

Sanco

- Flange material carbon steel: -10 to +60 °C (+14 to +140 °F)
- Flange material stainless steel: -40 to +60 °C (-40 to +140 °F)

Note!

Do not exceed the min. and max. temperatures for the lining of the measuring tube $(\rightarrow$ "Medium temperature range").

Note the following points:

- Install the device at a shady location. Avoid direct sunlight, particularly in warm climatic regions.
- If both fluid and ambient temperatures are high, install the transmitter at a remote location from the sensor (→ "Medium temperature range").

Storage temperature

The storage temperature corresponds to the operating temperature range of the transmitter and sensor.

Degree of protection

- Standard: IP 67 (NEMA 4X) for transmitter and sensor
- Optional: IP 68 (NEMA 6P) for remote version of Promag S sensor
- For information regarding applications where the device is buried directly in the soil or is installed in a flooded wastewater basin please contact your local Endress+Hauser Sales Center.

Shock and vibration resistance

Acceleration up to 2 g by analogy with IEC 600 68-2-6

(High temperature version: no data available)

Electromagnetic compatibility (EMC)

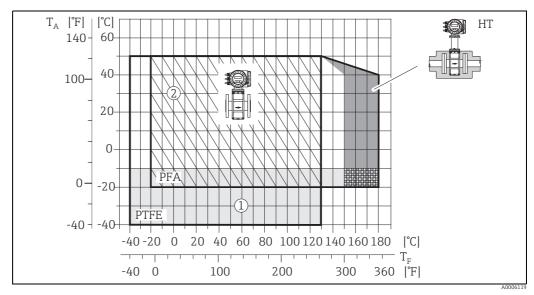

According to IEC/EN 61326 and NAMUR recommendation NE 21 $\,$

Process

Medium temperature range

The permitted temperature depends on the lining of the measuring tube:

- 0 to +60 °C (+32 to +140 °F) for natural rubber (DN 65 to 600 / 2½ to 24")
- \bullet 0 to +80 °C (+32 to +176 °F) for hard rubber (DN 65 to 600 / 2½ to 24")
- \bullet –20 to +50 °C (–4 to +122 °F) for polyurethane (DN 25 to 600 / 1 to 24")
- -20 to +180 $^{\circ}$ C (-4 to +356 $^{\circ}$ F) for PFA (DN 25 to 200 / 1 to 8"), restrictions \rightarrow see diagrams
- -40 to +130 °C (-40 to +266 °F) for PTFE (DN 15 to 600 / $\frac{1}{2}$ to 24"), restrictions \Rightarrow see diagrams

Promag S compact versions (with PFA or PTFE lining)

 T_A Ambient temperature

 T_F Fluid temperature

ΗT High temperature version with insulation

Gray shaded area \rightarrow temperature range from −10 to −40 °C (−14 to −40 °F) applies only to stainless steel flanges

HE + IP 68 to 130 °C (266 °F) only

Promag S remote versions (with PFA or PTFE lining)

 T_A Ambient temperature

 T_F Fluid temperature

HT

High temperature version with insulation Gray shaded area \rightarrow temperature range from -10 to -40 °C (-14 to -40 °F) applies only to stainless steel flanges

HE + IP 68 to 130 °C (266 °F) only

Conductivity

Minimum conductivity:

• \geq 5 μ S/cm for all liquids (incl. demineralized water)

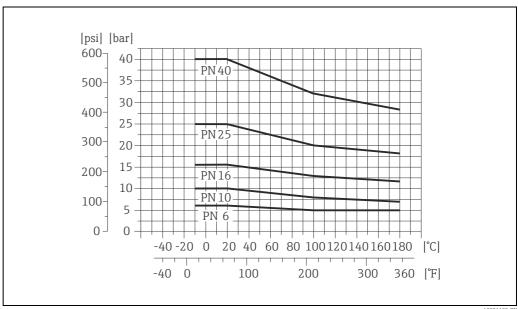

In the remote version, the required minimum conductivity is also influenced by the length of the cable → 🖺 18.

Pressure-temperature ratings

The following diagrams contain material load curves (reference curves) for various process connections relating to the fluid temperature. But the maximal permissible fluid temperature always depends on the lining material of the sensor and/or the sealing material.

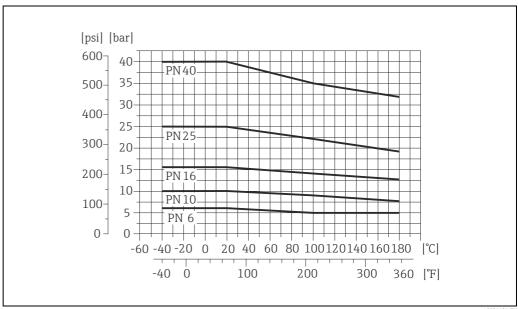

Process connection: flange according to EN 1092-1 (DIN 2501)

Process connection material: S235JRG2, S235JR+N, P250GH, P245GH, E250C, A105

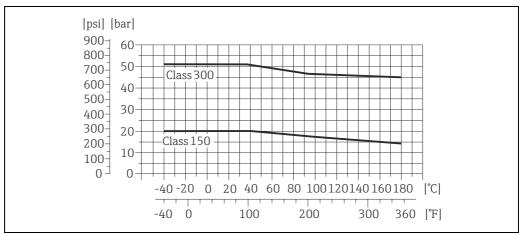

Process connection: flange according to EN 1092-1 (DIN 2501)

Process connection material: 1.4571, F316L

Process connection: flange according to ASME B16.5

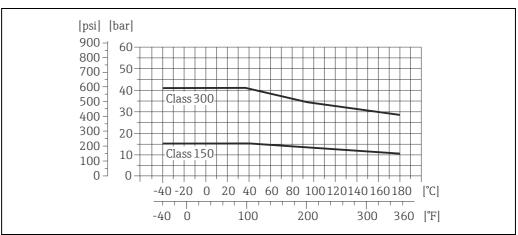

Process connection material: A105

A0021182-EN

Process connection: flange according to ASME B16.5

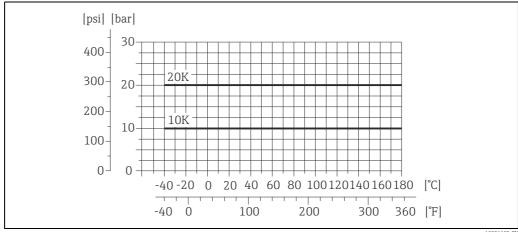

Process connection material: F316L

A0021185-EN

Process connection: flange according to JIS B2220

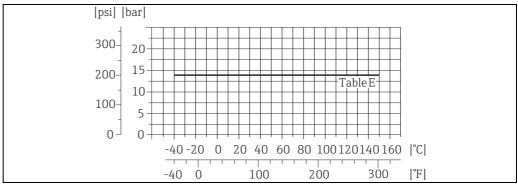

Process connection material: A105, A350 LF2, F316L

A0021183-EN

Process connection: flange according to AS 2129 Table E or AS 4087 PN 16

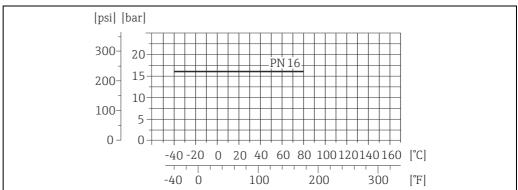

Process connection material: A105, P235GH, P265GH, S235JRG2

Δ0021189-FN

Process connection: flange according to AS 2129 Table E or AS 4087 PN 16

Process connection material: A105, P265GH, S275JR

A0023077-EN

Medium pressure range (nominal pressure)

- EN 1092-1 (DIN 2501): PN 10 (DN 200 to 600 / 8 to 24"), PN 16 (DN 65 to 600 / 2½ to 24"), PN 25 (DN 200 to 600 / 8 to 24"), PN 40 (DN 15 to 150 / ½ to 6")
- ASME B16.5: Class 150 (DN ½ to 24"), Class 300 (DN ½ to 6")
- JIS B2220: 10K (DN 50 to 600 / 2 to 24"), 20K (DN 15 to 600 / ½ to 24")
- AS 2129: Table E (DN 25 / 1", DN 50 / 2")
- AS 4087: PN 16 (DN 50 / 2")

Limiting flow

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 and 3 m/s (6 to $10 \, \text{ft/s}$). The flow velocity (v), moreover, has to be matched to the physical properties of the fluid:

- v < 2 m/s (6 ft/s): for abrasive fluids where solids do not cause sedimentation (e.g. lime milk)
- v > 2 m/s (6 ft/s): for fluids producing build-up (e.g. wastewater sludge)
- v > 2 m/s (6 ft/s): for abrasive sludge with a high sand or stone content and where the solids easily cause sedimentation (e.g. ore slurry)

Note!

Flow velocity can be increased, if necessary, by reducing the nominal diameter of the sensor through the use of adapters $\Rightarrow riangleq riangleq$

Flow rate characteristic values - Promag S (SI units)										
Nominal diameter	Recommended flow rate	F	actory settings

Pressure loss

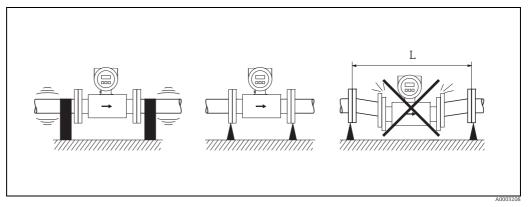

- No pressure loss if the sensor is installed in a pipe of the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 \rightarrow $\stackrel{\triangle}{=}$ 17.

Vibrations

Secure and fix both the piping and the sensor if the vibrations are severe.

Note!

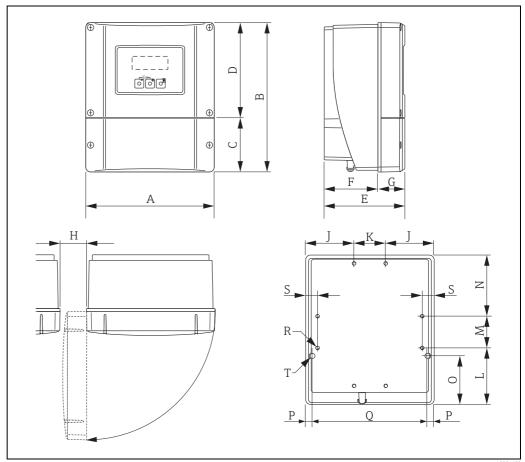

Measures to prevent vibration of the measuring device (L > 10 m / 33 ft)

Material

Transmitter housing:

• Compact and remote version: Powder-coated die-cast aluminum

Sensor housing:

- DN 15 to 300 (½ to 12"): Powder-coated die-cast aluminum
- DN 350 to 600 (14 to 24"): Painted steel

Measuring tube:

- DN < 350 (14"): Stainless steel 1.4301 (304) or 1.4306 (304L). For flanges of carbon steel with Al/Zn protective coating.
- DN > 300 (12"): Stainless steel 1.4301 (304). For flanges of carbon steel with protective paint finish.

Flange

- EN 1092-1 (DIN 2501): S235JRG2, S2345JR+N, P245GH, P250GH, E250C, A105, 1.4571, F316L (DN < 350 (14"): with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- ASME B16.5: A105; F316L
 - (DN < 350 (14") with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- JIS B2220: A105, A350 LF2, F316L
 - (DN < 350 (14") with Al/Zn protective coating; DN > 300 (12") with protective paint finish)
- AS 2129: A105, P235GH, P265GH, S235JRG2, with Al/Zn protective coating
- AS 4087: A105, P265GH, S275JR, with Al/Zn protective coating

Ground disks: 1.4435 (316L) or Alloy C-22

Electrodes:

- 1.4435 (316L), platinum, Alloy C-22, tantalum, titanium Gr. 2, tungsten carbide coating (for electrodes made from 1.4435)
- 1.4310 (302) (for brush electrodes), Duplex 1.4462, Alloy X750 (for brush electrodes)

Seals: according to DIN EN 1514-1 form IBC

Fitted electrodes

Comes as standard:

- 2 measuring electrodes for signal detection
- 1 EPD electrode for empty pipe detection
- 1 Reference electrode for potential equalization

Optionally available for measuring electrodes made of platinum:

- 1 EPD electrode for empty pipe detection
- 1 Reference electrode for potential equalization

For measuring tube with natural rubber lining in combination with brush electrodes:

• 2 brush electrodes for signal detection

Process connections

Flange connection:

- EN 1092-1 (DIN 2501)
 - DN < 300 (12"): Form A
 - DN > 300 (12"): Form B
 - DN 65 (2½") PN 16 and DN 600 (24") PN 16 exclusively according to EN 1092-1
- ASME B16.5
- JIS B2220
- AS 2129
- AS 4087

Surface roughness

- Lining with PFA: $\leq 0.4 \ \mu m$ (16 μin)
- Electrodes: 0.3 to 0.5 μm (12 to 20 μin)

All data relate to wetted parts.

Operability

Local operation

Display elements

- Liquid-crystal display: illuminated, four lines with 16 characters per line
- Custom configurations for presenting different measured values and status variables
- 3 totalizers
- At ambient temperatures below -20 °C (-4 °F), the readability of the display may be impaired.

Operating elements

- Onsite operation with three optical sensor keys $(\Box/\pm/E)$
- Application-specific Quick Setup menus for straightforward commissioning

Language groups

Language groups available for operation in different countries:

- Western Europe and America (WEA):
 English, German, Spanish, Italian, French, Dutch, Portuguese
- Eastern Europe/Scandinavia (EES):
 English, Russian, Polish, Norwegian, Finnish, Swedish, Czech
- South and East Asia (SEA):
 English, Japanese, Indonesian
- China (CN): English, Chinese

Note!

You can change the language group via the operating program "FieldCare".

Remote operation

Remote operation via HART, PROFIBUS DP/PA, FOUNDATION Fieldbus

Certificates and approvals

CE mark The measuring system described in these Operating Instructions therefore complies with the legal requirements of the EU Directives. Endress+Hauser confirms this by affixing the CE mark to it and by issuing the CE declaration of conformity. C-tick symbol The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)". Ex approval Information on the currently available Ex-rated versions (ATEX, FM, CSA etc.) is available on request from your Endress+Hauser sales outlet. All information relevant to explosion protection is available in separate documents that you can order as necessary. No applicable approvals or certification Sanitary compatibility The measuring devices can be ordered with or without PED (Pressure Equipment Directive). If a device Pressure equipment directive with PED is required, this must be ordered explicitly. For devices with nominal diameters less than or equal to DN 25 (1"), this is neither possible nor necessary. ■ With the identification PED/G1/III on the sensor nameplate, Endress+Hauser confirms conformity with the "Basic safety requirements" of Appendix I of the Pressure Equipment Directive 2014/68/EU. • Devices with this identification (with PED) are suitable for the following types of fluid: - Fluids of Group 1 and 2 with a steam pressure of greater or less than 0.5 bar (7.3 psi) - Unstable gases Devices without this identification (without PED) are designed and manufactured according to good engineering practice. They correspond to the requirements of Art.4, Section 3 of the Pressure Equipment Directive 2014/68/EU. Their application is illustrated in Diagrams 6 to 9 in Appendix II of the Pressure Equipment Directive 2014/68/EU. FOUNDATION Fieldbus The flow device has successfully passed all the test procedures carried out and is certified and certification registered by the Fieldbus Foundation. The device thus meets all the requirements of the following specifications: • Certified to FOUNDATION Fieldbus Specification • The device meets all the specifications of the FOUNDATION Fieldbus H1 Interoperability Test Kit (ITK), revision status 5.1 (device certification number: on request) • The device can also be operated with certified devices of other manufacturers • Physical Layer Conformance Test of the Fieldbus Foundation PROFIBUS DP/PA The flowmeter has successfully passed all the test procedures carried out and is certified and registered certification by the PNO (PROFIBUS User Organization). The device thus meets all the requirements of the following specifications: • Certified in accordance with PROFIBUS Profile Version 3.0 (device certification number: available on

- Certified in accordance with PROFIBUS Profile Version 3.0 (device certification number: available or request)
- The measuring device can also be operated with certified devices of other manufacturers (interoperability)

Ordering information

Note

Endress+Hauser reserves the right to change or modify product, specifications, and ordering information at any time without notice. Please consult Endress+Hauser or your local representative for the most recent information.

Accessories

Various accessories are available for the transmitter and the sensor. These can be ordered separately from Endress+Hauser.

Note!

For detailed information on specific order codes, please contact the Endress+Hauser service organization.
